JB Slideshow is a powerful Joomla and K2 content slider and fader. The slideshow module can be used to showcase your content in a fast and effective slideshow - in fact we like it so much that it features heavily in most of our [Joomla template releases](#) .

The slideshow can draw the images from your Joomla content or K2 items and display their titles, content, category name, date published, and in the case of K2, the comment count for each item.

The slideshow has a huge range of features which can help you control the layout and appearance of the slideshow. Be sure to check the full documentation on how to control the slideshow.

Key Features

- Display images, titles, introtext from your Joomla or K2 items
- 15 transition types to choose from
- Absolute control over positioning of the image, text, navigation on the page
- Smart image resizing or display original image
