jTweet is our very popular free Twitter module for Joomla. Its based on the sea of clouds twitter script. The jTweet script has a good range of options to help you to personalise your twitter stream making it a flexible and stylish option for integrating your tweets into your site. It utilizes jQuery, and is a must have for anyone who needs a Joomla twitter module.

Features

- Set the number of tweets to display
- Choose whether to display your avatar or not.
- Assign a funky twitter icon to the first tweet in your stream.
- Select whether to display just your tweets or all tweets related to a particular topic
- Select auto join phrases according to the nature of your tweet eg specific intro text for replies, verbs, replying to tweets and more.
- Set the text to appear while the tweets loads.
- Filter your own tweets via keywords. eg only display tweets that contain the word "joomla".
- Control the follow me text at the bottom of the module.
